

CS 111 ASSIGNMENT 4

due February 19, 2024

Problem 1: Give an asymptotic estimate, using the Θ -notation, of the number of letters printed by the algorithms given below. Give a complete justification for your answer, by providing an appropriate recurrence equation and its solution.

(a) **algorithm** PrintAs(n)
 if $n \leq 1$ **then**
 print("A")
 else
 for $j \leftarrow 1$ **to** n^3
 do print("A")
 for $i \leftarrow 1$ **to** 5 **do**
 PrintAs($\lfloor n/2 \rfloor$)

(b) **algorithm** PrintBs(n)
 if $n \geq 4$ **then**
 for $j \leftarrow 1$ **to** n^2
 do print("B")
 for $i \leftarrow 1$ **to** 6 **do**
 PrintBs($\lfloor n/4 \rfloor$)
 for $i \leftarrow 1$ **to** 10 **do**
 PrintBs($\lceil n/4 \rceil$)

(c) **algorithm** PrintCs(n)
 if $n \leq 2$ **then**
 print("C")
 else
 for $j \leftarrow 1$ **to** n
 do print("C")
 PrintCs($\lfloor n/3 \rfloor$)
 PrintCs($\lfloor n/3 \rfloor$)
 PrintCs($\lfloor n/3 \rfloor$)
 PrintCs($\lfloor n/3 \rfloor$)

(d) **algorithm** PrintDs(n)
 if $n \geq 5$ **then**
 print("D")
 print("D")
 if $(x \equiv 0 \pmod{2})$ **then**
 PrintDs($\lfloor n/5 \rfloor$)
 PrintDs($\lceil n/5 \rceil$)
 $x \leftarrow x + 3$
 else
 PrintDs($\lceil n/5 \rceil$)
 PrintDs($\lfloor n/5 \rfloor$)
 $x \leftarrow 5x + 3$

In part (d), variable x is a global variable initialized to 1.

The solutions for all the problems will use the master theorem, so I will just state it here. Let $a \geq 1, b > 1, c > 0$ and $d \geq 0$. If $T(n)$ satisfies the recurrence $T(n) = aT(n/b) + cn^d$.

$$T(x) = \begin{cases} \Theta(n^{\log_b(a)}) & a > b^d \\ \Theta(n^d \log(n)) & a = b^d \\ \Theta(n^d) & a < b^d \end{cases}$$

Solution 1:

(a) This algorithm can be rewritten as the recurrence: $A(n) = n^3 + 5A(\lfloor n/2 \rfloor)$. Applying the master theorem, with $a = 5, b = 2, c = 1, d = 3$. Since $5 < 2^3 = 8$, $T(n) = \Theta(n^3)$.

(b) This algorithm can be rewritten as the recurrence: $B(n) = n^2 + 6B(\lfloor n/4 \rfloor) + 10B(\lceil n/4 \rceil) = 16B(n/4) + n^2 \implies a = 16, b = 4, c = 1, d = 2$. From the master theorem, since $16 = 4^2$, $B(n) = \Theta(n^2 \log(n))$.

(c) This algorithm can be rewritten as the recurrence: $C(n) = 4C(\lfloor n/3 \rfloor) + n$. Applying the master theorem, with $a = 4, b = 3, c = 1, d = 1 \implies a > b^1 \implies C(n) = \Theta(n^{\log_3 4})$.

(d) This algorithm can be rewritten as the recurrence: $D(n) = 2 + 2D(n/5)$. The reason for the $2D(n/5)$ is because there even though there are four recursive calls in the code, only two are executed in any given iteration. Applying the master theorem, with $a = 2, b = 5, c = 2, d = 0 \implies a < b^d$, we have $B(n) = \Theta(n^{\log_5(2)})$.

Problem 2: We have three sets A, B, C with the following properties:

- (a) $|B| = 2|A|, |C| = 3|A|,$
- (b) $|A \cap B| = 18, |A \cap C| = 20, |B \cap C| = 24,$
- (c) $|A \cap B \cap C| = 11,$
- (d) $|A \cup B \cup C| = 129.$

Use the inclusion-exclusion principle to determine the number of elements in A . Show your work.

Solution 2: According to the inclusion exclusion principle, we have:

$$|A \cup B \cup C| = |A| + |B| + |C| - |A \cap B| - |A \cap C| - |B \cap C| + |A \cap B \cap C|.$$

We can substitute the values from (b), (c), (d) into the principle:

$129 = |A| + |B| + |C| - 18 - 20 - 24 + 11 \implies |A| + |B| + |C| = 180.$ To solve this, we want to put everything in terms of a single variable. From (a), we know the relationships between the three variables. I will choose to express everything in terms of $|A|$. Plugging this in, we get

$$|A| + 2|A| + 3|A| = 180 \implies |A| = 30.$$

From (a), we can find the rest of the values: $|B| = 60, |C| = 90.$

Problem 3: A company, Nice Inc., will award 45 fellowships to high-achieving UCR students from four different majors: computer science, biology, political science and history. They decided to give fellowship awards to at least 8 students majoring in computer science and at most 8 biology majors. The number of political science and history majors should be between 5 and 12 students each. How many possible lists of awardees are there? You need to give a complete derivation for the final answer, using the method developed in class. (Brute force listing of all lists will not be accepted.)

Solution 3: Let's say that the number of CS awards is C, biology is B, political science is P, history is H. We can express the conditions as:

$$C \geq 8$$

$$B \leq 8$$

$$5 \leq P, Q, \leq 12 \implies 0 \leq P', Q' \leq 7$$

$$C + B + P + H = 45$$

We can substitute $B' = B - 5$ and $P' = P - 5$ into the sum. Also, since C has no restrictions on the upper bound, we can kind of ignore it for now. We can now write:

$$B + P' + H' = 27.$$

We can also let the number of partitions that fit these conditions be the total number of partitions ($S()$) minus the number of invalid partitions:

$$S(B \leq 8 \wedge P' \leq 7 \wedge H' \leq 7)$$

$$= S() - S(B \geq 9 \vee P' \geq 8 \vee H' \geq 8).$$

We know that the total number of partitions,

$$S() = \binom{m+k-1}{k-1}, m = 27, k = 4 \implies S() = \binom{30}{3} = 4060.$$

We can also calculate the number of invalid partitions using the inclusion-exclusion principle. Also that the number of partitions with conditions is $\binom{m-A+k-1}{k-1}$, where A is the sum of the lower bounds.

$$S(B \geq 9 \vee P' \geq 8 \vee H' \geq 8) =$$

$$S(B \geq 9) + S(P' \geq 8) + S(H' \geq 8)$$

$$- S(B \geq 9 \wedge P' \geq 8) - S(B \geq 9 \wedge P' \geq 8) - S(B \geq 8 \wedge P' \geq 8)$$

$$+ S(B \geq 9 \wedge P' \geq 8 \wedge H' \geq 8)$$

$$= \binom{27-9+4-1}{4-1} + 2 \binom{27-8+4-1}{4-1}$$

$$- 2 \binom{27-(9+8)+4-1}{4-1} - \binom{27-(8+8)+4-1}{4-1} - \binom{27-(9+8+8)+4-1}{4-1}$$

$$= 1330 + 1540 + 1540 - 286 - 286 - 364 + 10 = 3484.$$

Subtracting the total with the number of invalid partitions, we get $4060 - 3484 = 576$.

Academic integrity declaration. The homework papers must include at the end an academic integrity declaration. This should be a short paragraph where you briefly explain *in your own words* (1) whether you did the homework individually or in collaboration with a partner student (if so, provide the name), and (2) whether you used any external help or resources.
